	Tjonger	3+3					
	bellus 750	2+2					
	Galle	3+3					
	Welle	2+1					

WATER PROTECTION

There are huge differences when it comes to how waste water produced on board is handled. Many shipyards and charter firms assure customers that "wastewater is collected on board" as a matter of course. In plain language, this means the same for water protection as if the boy next door assures you that he has never peed in the pool. The large waste water tanks on our houseboats are designed in such a way that no waste water (shower water, washing-up water, toilet waste water etc.) and, above all, no chemicals enter the lakes. Our boats can store up to 1,500 liters of waste water. Guests are shown how to empty the tanks easily and independently at a pump-out station in the harbors. In this way, we ensure cleaner lakes in which everyone enjoys swimming.

FOR FREE:
Moorings, water filling and waste water disposal also during the cruise in the harbor village of Müritz, in Berlin-Zeuthen and in Niderviller (no disposal)

ONEWAYS

Ask us about the feeder service

E-CHARGING STATION FOR CARS

2 charging options at Hafendorf Müritz

ANCHORING / ENJOYING FREEDOM

Many boats are equipped with solar systems (photovoltaics), which also supply the refrigerator and other on-board equipment with electricity when at anchor, thus enabling you to remain independent for longer. Just ask us.
